Countermeasures and security best practices for cyber security

1. Install and maintain updated anti-virus and anti-spyware software at desktop level.
2. Scan computer system with updated anti-virus for possible infections and disinfect the same.
3. Install and maintain personal desktop firewall.
4. Check for the suspicious network activities of infected computer system mentioned in list and disinfect the same if found.
5. Use only genuine software.
6. Keep up-to-date patches and fixes on the operating system and application software.
7. Exercise caution while opening email attachments.
8. Do not browse un-trusted websites or follow un-trusted links and exercise caution while click on the link provided in any unsolicited emails.
9. Maintain logs of system/network and preserve the same to enable appropriate incident response/forensics.
10. Maintain regular backups of data to avoid the risk of data loss.
